

BBS | Uelzen

Welcome
- We live sustainability!

Our local/regional ESD-VESD-Concept

Our Mission Statement

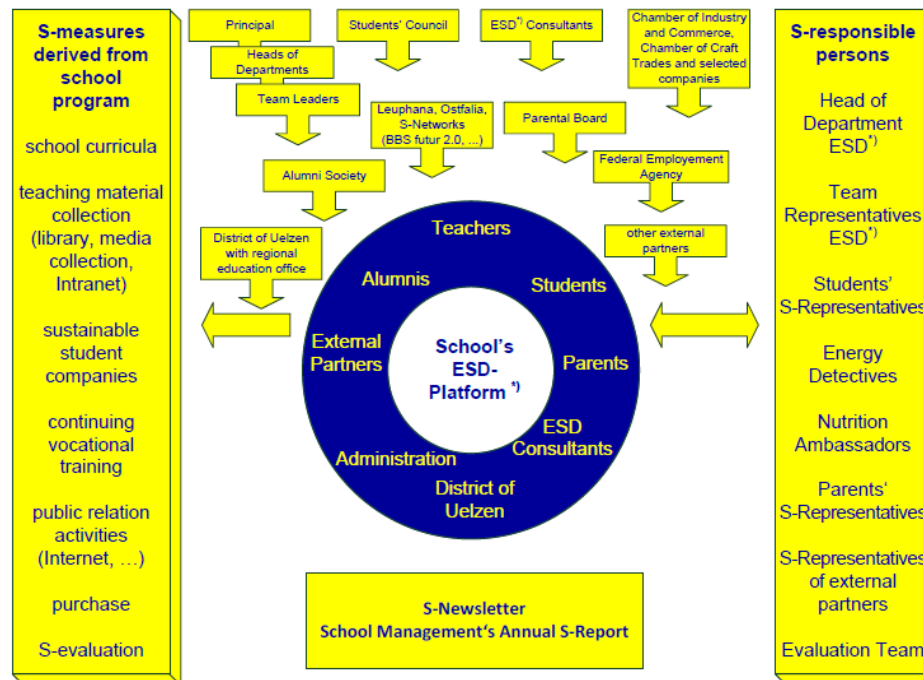

Preamble

The Vocational Schools I Uelzen (BBS I Uelzen) were established in 1832 and they are a barrier-free Environment School in Uelzen. True to the principal motto "Shaping the future together" we as a regional centre of competence are guided in the organization and in our school life by the German Sustainability Code (GSC). Sustainable development is a development that ensures the quality of life of the current generation and at the same time makes sure that future generations have the chance to shape their lives.

Sustainable education aims to develop the individual action and creativity competence of young people and young adults for a liveable future in a democratic society. This includes:

- social sustainability in terms of human rights, global responsibility and peaceful conflict resolution,
- environmental sustainability in the sense of preserving the natural environment for future generations,
- economic sustainability in terms of resource-saving economy.

Education for sustainable development (ESD) is for us the guiding principle in the way we organize our lessons and our school life. Moreover it is the basis for a responsible lifestyle. The school community and the management of the BBS I Uelzen live the idea of sustainability and thus are a role model in the region.

*) ESD: Education for Sustainable Development and Vocational Education and Training for Sustainable Development

Our Guiding Principles

In line with our principal motto "Shaping the future together" the following guiding principles form the basis of our school program. The focus is on the students.

- We orient ourselves in our pedagogical principles on the educational mandate of our school.
- We train our students, in the present and in the future, to achieve occupational competence according to the concept of action orientation.
- We support our students in the process of lifelong learning.
- We ensure the future viability of our students.
- We promote the participation and inclusion of all members of the school community.
- We strengthen the ecological awareness and fundamental principles of sustainability.
- We practice a trilateral vocational orientation in cooperation with the general educational schools and the universities of the region as well as our dual partners.
- We exchange intensively information and experience with our five international partners.
- We work together with other partners in our region.

The BBS I Uelzen actively participated as co-exhibitor at the exhibition "**Sustainability 360 degrees - learning locations for the future**" in **hall 12** at **stand F57** in Hanover during the **DIDACTA 2018** and on the **UNESCO day on 21 February 2018**.

At Europe's largest education exhibition from 20 February until 24 February 2018 we were able to present ourselves as "**Best Practice Example: Shaping/ Organizing of a Sustainable Learning System/Place for Vocational Education and Training**".

In the opinion of the German UNESCO Commission the BBS I Uelzen are a national and international lighthouse and the flagship vocational school in Germany and Europe concerning the implementation of ESD and VESD.

We would be delighted about a nomination!

The Vocational Schools I Uelzen have been nominated in May 2018 by the German UNESCO Commission and the Federal Ministry of Education and Research as one of three German candidates for the International Japan UNESCO Prize 2018, because our local / regional sustainability concept of education is suitable for transfer!
